Description

On Windows Vista JTorX 1.1.1 is unable to connect to anidot and animsc servers, even though these are running.

This might be related to JTorX trying to connect to host name "localhost".

(created version 1.1.2a that uses a hopefully more portable way to connect to the loopback interface, and given it to try out)

TODO: make sure that the Multicast connections from anidot and animsc don't suffer from the same issue.

History

#1 - 30 Oct 2009 11:18 - Axel Belinfante

- Status changed from New to Feedback

- % Done changed from 50 to 80

received confirmation that connection to the viewers now works

(waiting for confirmation about the multicast connection from the viewers to JTorX)
